Introduction to Probability and Statistics

Probability Distribution Let X be a continuous rv Then a probability distribution or probability density function (pdf) of X is a function $f(x)$ such that for any two numbers a and b , $b > a$ $P(a < X < b) = \int_a^b f(x) dx$ This gives the probability that X takes on a value in the interval $[a, b]$ It ...

Introduction to Probability and Statistics

Probability • In probability problems, properties of the population under study are assumed known (eg, in a numerical population, some specified distribution of the population values may be assumed) and question regarding a sample taken from the population are posed and answered Statistics

• In Statistics problems, characteristics of a

An Introduction to Basic Statistics and Probability

An Introduction to Basic Statistics and Probability - p 10/40 Probability Distributions The probability distribution for a random variable X gives the possible values for X , and the probabilities associated with each possible value (ie, the likelihood that the values will occur) The methods used to specify discrete prob distributions are similar to (but slightly different from) those
